

**ceramics chemistry encyclopedia structure water uses** - silicon dioxide  $\text{SiO}_2$  other ceramic materials including many minerals have complex and even variable compositions for example the ceramic mineral feldspar one of the components of granite has the formula  $\text{KAlSi}_3\text{O}_8$  the chemical bonds in ceramics can be covalent ionic or polar covalent depending on the chemical composition of the ceramic, **publications nano materials drexel edu** - publications for a list of journals on which dr gogotsi serves as an editor or editorial board member [click here to get pdf copy of our publications](#) please contact prof yury gogotsi [gogotsi@drexel.edu](mailto:gogotsi@drexel.edu) or danielle kopicko [dk372@drexel.edu](mailto:dk372@drexel.edu), **accident tolerant fuel cladding sciencedirect** - during severe accidents core cooling is often interrupted and the decay heat in the fuel  $q$  in equation drives the core temperature upward as the core becomes uncovered water level decreases the heat transfer processes become less efficient temperatures rise further and the fuel elements start to experience physical and chemical degradation
